

B-Station2

The B-Station2 is a wall-mount button panel with 6 push-buttons. It can remote control any function within the CueCore or LPU-2. The buttons are RGB-lit and can provide visual feedback, for example, to indicate the selected cue or active show.

Multiple B-Stations can be networked together. The button station supports various open protocols like OSC, UDP, TCP, sACN and Art-Net. This allows it to be integrated with other 3rd party network-based systems as well, e.g. audio, video or show control systems.

For architectural projects, the B-Station2 contains an inbuilt DMX engine. This makes the B-Station2 a stand-alone lighting control system that is capable of programming 32 fixtures through 6 independent playbacks. All programming is done via the web-interface, no additional client software is required.

SPECIFICATIONS

- Ethernet port
- Programming via web-interface
- 6x RGB lit push-button
- DMX-512 (ANSI E1.11) opto-isolated
- RDM (ANSI E1.20)
- Art-Net
- sACN
- OSC & UDP in & out
- TCP in
- Power over Ethernet (class I)
- Wall-mount
- Operating temperature -20°C to +50°C (-4°F to 122°F)
- Compliance EN55103-1 EN55103-2
- Shipped with adhesive labels (numbers & symbols)
- Bundled with vManager software
- Compatible with Kiosc software
